AGENDA

1.COMMUNITY

Understand the community & their needs

1.COMMUNITY

*Who we serve: Gig motorbike riders in Vietnam
(ride-hailing & delivery)*

Size & Growth

Vietnamese market projected to grow
to USD 2.5B by 2030 (CAGR 19.5%)

approximately **400,000 motorbike
riders** on major platforms

Source: Mordor Intelligence, Lao Dong News

1.COMMUNITY

*Who we serve: Gig motorbike riders in Vietnam
(ride-hailing & delivery)*

Demographics

Age: 18-35 (68% of total riders under 35)

95% male, 5% female

50% based in urban areas (Ho Chi Minh, Ha Noi)

Majority migrating from rural provinces

73% married, **60% supporting 2+ dependents**

Source: Vietnamnet, VNEconomy

1.COMMUNITY

*Who we serve: Gig motorbike riders in Vietnam
(ride-hailing & delivery)*

Work profile & Income

70–80% full-time riders (primary income)
→ \$700–\$1,050 AUD/month (10–12 hrs/day,
6–7 days/week)

20–30% part-time (students, side jobs)
→ \$230–\$460 AUD/month

Income **fluctuates 10-30% monthly** due
to external factors (weather, platform
issues, traffic, customer cancellations)

Source: Tuổi Trẻ News, CuuChienBinh

1.COMMUNITY

Behind the ride: what are they struggling with?

“I earn day by day. Some days I send money home, some days I can’t. If I miss even one day, it’s hard to catch up — rent’s still there, bills don’t wait.”

- Hieu, 35

—————→ **Highly rely on daily income**

“During heavy rain, some orders get canceled after I’ve already waited or driven far. I lose the fare, the fuel, and the time — what can I do!”

- Doanh, 30

—————→ **Extreme rain - one of the biggest income disruptions**

"When it pours, fares stay the same, but traffic, flooding, and cancellations make the job harder and riskier. Even with high demand, it’s hard to risk the ride — we might end up with nothing if the order gets canceled."

- Hoang, 20

—————→ **Insufficient compensation for high-risk rainy conditions**

Source: Tuoi Tre News, Thanh Nien News, VnExpress

1.COMMUNITY

Extreme weather really matters!

Vietnam's Climate Reality: More Rain, More Risk

Past trend (1980-2017)

- The frequency and intensity of extreme rain rose by 2mm/year in peak rainfall.
- Over 20% of Vietnam's weather stations reported more days with >25 mm rain

Current trend (Ho Chi Minh City, 2017-2022)

- 148–158 rainy days/year on average
- Aug–Oct: **up to 28 rainy days/month**, with 297mm total rainfall

(World Meteorological Organization considers 100–150 mm/month already a high rainfall level)

Future risk (2030-2059)

Models predict a **12.1% increase in extreme rainfall** events

Monthly rainfall (mm) in Ho Chi Minh city (from 2017-2022)

Source: Copernicus Climate Change Service — Monthly averages for Ho Chi Minh City, Jan 2017 to Jan 2022. Metric: precipitation (mm).

Average rainy days per month in Ho Chi Minh city (from 2017-2022)

Source: Copernicus Climate Change Service — Monthly averages for Ho Chi Minh City, Jan 2017 to Jan 2022. Metric: precipitation days (≥ 1 mm).

1.COMMUNITY

Extreme weather really matters!

2004

A 127mm rain in a few hours caused
over 100 streets flooded in HCMC

2018

A storm 119 mm in 3 hours, 30+ major
roads flooded with 60 cm water depth

2018

Typhoon Usagi brought 300+ mm in 24 hours,
HCMC's most intense rainfall this century

2021

18 of 46 heavy rain events (>50 mm in one
occurrence) triggered immediate severe flooding.

2022

over 20 high tides above danger levels – often
flooding roads even without rain

2050

extreme flood risk in HCMC could
increase up to 10-fold by 2050.

Urban Infrastructure Is Overwhelmed

The problem: HCMC's current drainage system only handles
up to 95mm in 3 hours — exceeded frequently.

1.COMMUNITY

Heavy Rain. Lost Rides. Lost Income.

Missed opportunities

Lost trips despite high demand: increased orders with increased risks of road closures, and flooding.

High mid-trip cancellation: get canceled mid-trip due to long wait times

Shrinking productive hours: more time is spent navigating slow, dangerous conditions, lowering total daily trips.

Real losses

Unpaid cancellations: fuel, time, and effort are wasted with no compensation when trips are canceled

Damage & maintenance costs: floodwater can cause costly bike repairs

→ *Main concern: earnings are highly unpredictable, even for those active in challenging rainy conditions.*

2. INNOVATIVE SOLUTION

Turning Stormy Days into Steady Pay

2. INNOVATIVE SOLUTION

UMBRELLA: When it pours, your income stays secure

Concept Explained - Automated Rain-Time Income Stabilisation

*UMBRELLA is a parametric micro-insurance solution designed for Vietnam's gig riders who **face unpredictable income loss during extreme rainfall events**. Using real-time rider activity tracking and high-precision rainfall data, the product automatically tops up a rider's income if they actively work through heavy rain but earn less than their usual average.*

SUBSCRIPTION & ELIGIBILITY

2. INNOVATIVE SOLUTION *UMBRELLA: How it works?*

Options

Riders choose monthly, quarterly, or annual plans.

1-day waiting period to prevent last-minute signups just before a storm

Eligibility

Active (at least) for the past 7 consecutive days to ensure enough operational history for fair pricing

Dynamic pricing

Rider's historical performance (online hours, job acceptance rate, income per hour, operating locations)

Hyperlocal weather forecasts for the insured period

2. INNOVATIVE SOLUTION *UMBRELLA: How it works?*

Thành phố
Hồ Chí Minh

**CONTINUOUS DATA
MONITORING**

Mapletree Business Center
Cổng Trước GrabBike

Rider activity tracking

Automatically captures location pings, active online hours, and jobs accepted via Grab's backend.

Verified weather feed

Pulls rainfall data from certified meteorological agencies and cross-checks with satellite maps for accuracy

Secure data handling

All information is encrypted end-to-end to protect rider privacy and build trust.

2. INNOVATIVE SOLUTION

UMBRELLA: How it works?

SMART TRIGGER CHECKS

Trigger Checks

Evaluations run every 8 hours (not just end-of-day) to capture overnight riders and varied work shifts.

Three-step validation

- 1. Rain Zone Match:** Rider's GPS shows presence in a verified heavy rain zone
(≥ 30 mm/hour, ≥ 50 mm/6 hours, or ≥ 100 mm/day).
- 2. Active Work Verification:** Rider online for ≥ 6 hours in that period, with active job acceptance, preventing “cherry-picking” of hours.
- 3. Income Drop Check:** Income/hour during heavy rain is compared to the rider's 7-day rolling average to confirm real loss.

A person wearing a green raincoat and a black helmet is seen from behind, holding a large black umbrella. They are standing in the rain. In the background, another person on a motorcycle is visible, also in the rain. The text "INSTANT & CAPPED PAYOUT" is overlaid in white on the left side of the image.

INSTANT & CAPPED PAYOUT

2. INNOVATIVE SOLUTION *UMBRELLA: How it works?*

Automatic payout

If all triggers are met, automatic payout is sent directly to the rider's wallet — no claims, no human approval.

Capped payout

Payout caps per subscription period limit exposure to extreme tail-risk events while keeping premiums affordable.

Payout history

Transparent in-app tracker shows payout history and trigger events, building trust.

Note: rain doesn't always mean lost income — sometimes surge pricing or short trips can offset bad weather. Our system only triggers payouts when both heavy rain and a measurable income drop occur, ensuring the cover is fair, targeted, and sustainable. This avoids false payouts while still protecting riders when they truly face loss.

2. INNOVATIVE SOLUTION

UMBRELLA: Qualified Payout

Subscription: 12-month Umbrella plan for AUD 120 (~ AUD 0.33/day — equal to one average job's income).

Activation: Coverage starts after a 1-day waiting period and past 7 days of verified activity.

Event: Heavy rain hits Zone 1 from 1 PM to 3 PM; streets flood, traffic slows, and cancellations rise.

Verification: System cross-checks rider's GPS location with official rainfall data (≥ 30 mm in 1 hour threshold met)

Work Performance: Rider stayed online but completed only 3 jobs in 2 hours, earning AUD 6/hour (even with +30% surge).

Baseline: 7-day average income/hour = AUD 9/hour.

—————→ *Payout Calculation (\$9 AUD – \$6 AUD) $\times$ 2 hours = \$6 AUD top-up sent automatically to Grab wallet — no claims form, no human approval..*

Nguyen, 29: full-time GrabBike rider in Ho Chi Minh City, 3 years' experience.

2. INNOVATIVE SOLUTION

UMBRELLA: Unqualified Payout

Subscription: 1-month Umbrella plan for AUD 15 (~AUD 0.50/day).

Activation: coverage starts after a 1-day waiting period and past 7 days of verified activity

Event: Heavy rain hits Zone 1 from 1 PM to 3 PM; streets flood, traffic slows, cancellations rise.

Verification: system cross-checks Minh's GPS location with official rainfall data (≥ 30 mm in 1 hour threshold met).

Work Performance: stayed online and completed 6 jobs in 2 hours, earning AUD 10/hour (including +30% surge)

Baseline: 7-day average income/hour = AUD 9/hour.

—————→ *Payout Calculation (AUD 9 – AUD 10) × 2 hours = negative difference → No top-up needed, earnings during the rain exceeded rider's usual average*

Quang, 32: part-time GrabFood rider in Ho Chi Minh City, 1.5 years' experience..

UMBRELLA is a Brand New product: bridging the Gaps in Today's Solutions

PRODUCT	PERSONAL ACCIDENT INSURANCE	RAINY-DAY SURCHARGE	FAILED DELIVERY SUPPORT
PLATFORM	 Southeast Asia's leading super app for ride-hailing, delivery, and digital payments	 Southeast Asia's leading super app for ride-hailing, delivery, and digital payments	 Vietnam-based on-demand delivery platform specializing in same-day and instant delivery services
COVERAGE	Covers injury/death during an active trip; medical cost reimbursement	Small per-trip bonus (AUD \$0.18–\$0.36) during rain.	Partial return cost reimbursement for failed deliveries
LIMITATIONS	No income replacement if unable to work after accident	After platform fees and taxes, rider keeps less than extra fuel/time cost	Limited to specific failed delivery cases; requires manual claim and proof submission
IMPACTS ON RIDERS	A rider injured mid-shift may lose several days' income even if medical costs are covered	Earnings/hour can still fall by 30–40%, making rain shifts unprofitable.	Offers minimal relief; does not help when fewer jobs are completed.

First-Ever Weather-Linked Income Protection for Vietnam's Gig Riders

SOLUTION	PAINPOINT ADDRESSED	WHY IT WORKS
Weather-indexed payouts <i>triggered by official rainfall data</i>	Daily income volatility – unpredictable shortfalls can wipe out a day's budget	Removes uncertainty; riders receive predictable compensation without manual claims
Direct income loss cover <i>(not just accidents or failed deliveries)</i>	No safety net for lost work hours – accident cover and delivery failure fees don't address income gaps	Protects riders' earnings even when they can't work due to severe weather
Platform-integrated data for <i>real-time, fair payout calculation</i>	Flat surcharges are inadequate – e.g., AUD 0.25–0.35 net per trip after fees/taxes	Payout matches actual lost income instead of relying on low, fixed bonuses
Instant, automated payouts	Overwork and exhaustion – riders push harder on dry days to recover lost income	Funds arrive the same day, easing pressure to work unsafe hours
Guaranteed income protection	Safety risks – riders feel forced to work in dangerous weather	Riders can pause or slow work during extreme conditions without losing pay

A Balanced Approach: Strengths and Considerations

OUR ADVANTAGES

Stable income and reduced financial distress

Provides a predictable safety net during the rainy season, easing financial pressure and improving riders' mental well-being and overall resilience

Trust-building through simplicity and transparency

using existing rider app, clear daily payout criteria displayed in-app. The community often skeptical of insurance and less familiar with financial products.

CHALLENGES & CONTROLS

Premium affordability

For some low-income riders, paying upfront may feel costly, but coverage is designed to deliver greater value during the rainy season

Possible over-reliance on protection

Some riders may try to work more in unsafe conditions expecting payouts but safeguards in the product design limit risky or opportunistic use

3. LAUNCH STRATEGY

Right Place, Right Time, Right Message

3. LAUNCH STRATEGY

Distribution Plan - How UMBRELLA approaches riders

Partnering with Grab for high reach and trust

1. *Product Placement*
2. *Enrollment & Payment Process*
3. *Push notification campaign (segmented & time)*

Seamless access to thousands of riders through their most trusted platform

40%

total market share in Vietnam

300,000+

active driver-partners nationwide

3. LAUNCH STRATEGY

Distribution Plan - How UMBRELLA approaches riders

Product Placement

Embedded in 'Grab Driver' app

Announced in 'Grab Driver Benefits' hub

Enrollment & Payment Process

Quick sign-up, instant protection

*Pay your way
fast, familiar, flexible.*

3. LAUNCH STRATEGY

Distribution Plan - How UMBRELLA approaches riders

Push Notification Campaign by **Grab**

Pre-Season Awareness

Objective

Build familiarity and educate drivers about the product before the rain starts

Example

“Rainy season is coming soon. Don’t let bad weather wash away your earnings. Join UMBRELLA now and get 20% off this month.”

In-Season Trigger Alerts

Objective

Drive quick sign-ups by alerting riders before high-risk weather events in their area

Example

“Heavy rain forecasted next week in Binh Thanh. Stay secured with UMBRELLA — activate coverage today and ride with peace of mind.”

Post-Payout Emotional Reinforcement

Objective

Strengthen trust, encourage renewals, and boost word-of-mouth referrals after payouts.

Example

“You just received 80,000 VND from UMBRELLA for today’s rain disruption. Rain or shine — we’ve got your back.”

3. LAUNCH STRATEGY

Marketing Strategy - Turning Riders Into Members

Grab ——— **UMBRELLA**

Making UMBRELLA visible & trusted

1. Awareness

Maximize visibility of UMBRELLA among active Grab riders, especially before and during the rainy season.

2. Trust & Conversion

Build belief in the product and convert interest into subscriptions using relatable proof and simple explanations.

3. Loyalty & Retention

Keep riders engaged month to month and get them to recruit others.

AWARED

Riders know it, trust it, want it

SUBSCRIBED

Interest turns into real subscriptions

RETAINED

Riders stay, refer, and keep coming back

3. LAUNCH STRATEGY

Marketing Strategy - Turning Riders Into Members

AWARENESS
Facebook community group

TRUST & CONVERSION
Testimonial - Success payout stories

LOYALTY & RETENTION
Peer-referral Program

Spark conversations: weather-related income loss in rider groups.

Naturally introduce: Umbrella as a trusted, peer-recommended solution.

Real riders' sharings: how Umbrella helped them recover lost earnings

Informative, relatable videos: make payouts feel real, simple, and easy to claim.

Extra discount: bring friends on board with a 10K discount or extra coverage days

Monthly leaderboard:/statistic: Keeps riders engaged while growing the community.

4. BUSINESS IMPACTS

When riders thrive, business thrives

Monitoring: Clear Targets, Real Outcomes

FOR THE INSURER

METRIC	TARGET		
Loss Ratio	<70%	Ensure product stays profitable despite seasonal weather spikes	Cap payouts, use dynamic seasonal/district pricing, verify claims via Grab data + weather API
Claim Frequency	<30% monthly	Control payout volatility, keep premiums sustainable	Adjust premiums pre-peak season using rainfall & rider exposure data; monitor weekly

Goal: Maintain profitability and predictable cost control.

FOR THE COMMUNITY

METRIC	TARGET	RATIONALE	HOW WE ACHIEVE
Monthly Rider Adoption	5–15%	Reach critical mass word-of-mouth without overexposure risk	In-app Grab Benefits tab placement, rainy-day push alerts, referral bonuses
In-Season Retention Rate	>80%	Keep revenue stable, lower marketing costs	Instant payouts, rainy-day reassurance messages, tier upgrades for loyal users

Goal: Build adoption, loyalty, and scalable market presence.

1. FINANCIAL LOSS RISK

Extreme weather spikes or mispriced premiums could lead to payouts exceeding collected premiums.

2. PARTNERSHIP DEPENDENCY RISK

The product's accuracy and automation rely on Grab's rider data (hours worked, income, location). Any disruption in data access or partnership could halt operations.

3. FRAUDULENT CLAIM RISK

Riders may attempt to manipulate work activity logs or weather reports to trigger unwarranted payouts.

→ **Dynamic pricing** using historical weather patterns, real-time forecasts, and rider activity data.

Monitor claims ratios and adjust premiums by season, region, or coverage tier.

→ **Binding agreements** with data-sharing protocols, service-level standards, and dispute resolution.

Offer co-branding or revenue-sharing incentives to maintain long-term alignment.

→ **Payouts are fully automated** (Grab's verified platform data with independent weather API readings on location, timing, and severity)

Cross-verification: only legitimate income shortfalls are compensated

Not just innovative, UMBRELLA is Practical

PROFITABLE

High-Potential, Predictable Revenue

SUSTAINABLE

Social & Market Sustainability

FEASIBLE

Low-Cost, Data-Driven, Win–Win

Large reachable base

Vietnam has ~300,000 Grab drivers, market expected to grow

Source: Dan Tri News

Clear model

10% adoption rate (30,000 drivers) would generate approximately AUD 648,000 per year in revenue

Cost control

Automated payouts and verified weather data to prevent fraud, cap claims, seasonal/region-based pricing adjustments

Social impact

Reduces stress, improves safety, and strengthens loyalty

Scalable monetisation

Pricing tiers and add-on covers (e.g., heatwaves, accident income cover), boosting Average Revenue Per User.

Market growth & replication:

Roll out to other cities in Vietnam and adapted for other SEA ride-hailing/delivery markets

Low admin cost

Weather APIs + in-app data automate claims, cutting overhead and fraud risk.

Mutual value

- **For Grab:** Higher driver retention, safer availability, and stronger brand reputation during bad weather
- **For insurer:** Low customer acquisition cost access to Vietnam's largest rider base, data-driven pricing, fraud-resistant claims, and easy expansion across SEA markets

THANK YOU FOR LISTENING.
